

Knowledge Import

Parse experience sources into editable Candidate Skills. Imported Skills stay Candidate (S1) until a human reviewer audits, creates, and optionally promotes them to Draft (S2).

➤ Trajectory

Browser-use normalized trajectory: buy-groceries

Source file: examples/use-cases/buy_groceries.py

Original task excerpt

Use this browser-use example as a public multi-step browser task.

Normalized trajectory

1. Open the required browser context.

2. Observe page state and task constraints.

3. Choose the next safe browser action.

4. Execute search/click/type/select/load/extract as needed.

5. Re-observe and repair the plan if expected evidence is missing.

📄 Parse for Candidate Review

Parsing does not release a Skill. It only prepares an S1 candidate draft.

Candidate Review

Candidate (S1), not Released

Human review boundary

This panel turns parsed experience into a candidate Skill. Audit results are evidence, not release approval.

Candidate name

trajectory_execute

Skill type

functional

Description

Execute the reusable skill from trajectory workflow.

Tags

trajectory, candidate-review, ctx2skill, execute, reusable

Prompt template

Execute the reusable trajectory capability. Execute the reusable skill from trajectory workflow. Return JSON with result, evidence, and verifier.
